Abhishek Nayal

Professional Summary

Full Stack Developer with experience in Python, FastAPI, React, and REST APIs, contributing to scalable applications and multi-tenant systems. Worked on AI development using Claude and Cursor, including AI agents, structured prompting, AI-assisted testing, debugging, and code generation. Worked with Claude skills to define better coding guidelines, reusable workflows, and context for AI-assisted software development.

Technical Skills

Programming Languages : Java, JavaScript, Python, C, Ruby.

Backend & Databases: Spring Boot, Spring Security, REST APIs, FastAPI, Hibernate, PostgreSQL, MySQL.

Frontend: React, Redux, HTML5, CSS3, Bootstrap, Tailwind CSS

Tools & DevOps: Git, GitHub, Docker, CI/CD, Nginx, Postman

Security & Testing : JWT, JUnit, API Testing.

Professional Experience

Software Engineer Intern – *Code Garage Tech Pvt. Ltd.* *April 2026 – Present*

- Worked with AI-assisted prompting techniques and Claude skills files (`skills.md`) to improve development workflows, code generation, testing, and debugging in Unwind.
- Improved and optimized UI components to enhance usability, responsiveness, and overall user experience.
- Currently working on Connvo, a production-grade multi-tenant customer support and automation platform involving IVR, live call queues, dashboards, and third-party integrations.

Connvo – Omnichannel Customer Support & Automation Platform

- Developed features for a scalable multi-tenant customer support platform using Ruby on Rails and PostgreSQL, supporting workflows across multiple client organizations.
- Worked on IVR systems, live call queues, and real-time support dashboards using WebSockets with Action Cable for efficient real-time communication.
- Implemented background job processing using Sidekiq for asynchronous workflows, improving reliability and responsiveness of customer support operations.

Unwind – Workflow Visualization Platform

- Built a Python and FastAPI platform to visualize complex codebases through interactive dependency graphs.
- Simplified codebase understanding through visual dependency mapping, reducing complexity by 50%.
- Created AI-assisted workflows using Claude Skills files for code analysis and development automation.
- Implemented CloudWatch telemetry and structured logs for monitoring application workflows and performance.

Projects

JeevanCare – Telemedicine Web App *github.com/JeevanCare*

- Engineered a full-stack telemedicine platform using React, Firebase, and Spring Boot, enabling real-time video consultations via WebRTC.
- Developed and integrated an AI chatbot for automated symptom checking and RESTful API-based health recommendations.
- Implemented authentication and authorization using JWT, ensuring secure access control and protection of sensitive healthcare data.

CI/CD Automation Platform *github.com/CI-CD*

- Developed Backend for a CI/CD platform to automate build, test, and deployment workflows.
- Implemented secure authentication and role-based authorization using JWT and Spring Security.
- Designed RESTful APIs with Spring Boot for managing projects, pipelines, and execution history.

Education

Uttarakhand Technical University (VMSBUTU) *Sept 2022 – July 2026*

B.Tech in Computer Science — **CGPA: 7.9/10.0**

- **Coursework:** Operating Systems, DSA (LeetCode + Regular Problems). *github.com/DSA*
